

EVENT FORCE MANAGEMENT SYSTEM

An **Event Force Management System** (also commonly referred to as an **Event Workforce / Field Force Management System**) is a software platform designed to manage, coordinate, track, and resources (volunteers, staff, security, vendors, technical teams, speakers, and coordinators) before, during, and after an event.

Here is a comprehensive breakdown of an **Event Force Management System** project structure, architecture, modules, and implementation details.

1. Project Overview & Objective

- **Objective:** Is automate workforce management for events (college symposiums, corporate summits, concerts, expos, sports events).
- **Problem Solved:** Replaces manual spreadsheet tracking, phone call coordination, and fragmented scheduling with automated task assignments, live updates, attendance verification, and performance evaluation.
- **Target Users:**
 1. **Super Admin**
 2. (Full access, analytics, global control)
 3. **Team Lead / Zone Head** (Manages specific areas, assigns daily/hourly task)

- 4. **Event Staff / Volunteer / Field Workforce** (Receives tasks, marks attendance, reports issues)

2. Core Functional Modules

Module 1: Authentication & Role-Based Access Control (RBAC)

- **Features:**

Secure login using credentials, OTP

- **Process:**

User enters credentials → System validates role (Admin, Team Lead, Volunteer) → Redirects to designated dashboard.

3. Objectives

The main objectives of the system are:

To manage event details efficiently.

To maintain staff/force information.

To assign suitable staff to events.

To manage event venues.

To schedule event duties.

To track staff and event status.

To reduce manual work.

To improve communication and coordination.

To generate useful reports

Users of the System

4.1 Admin

The Admin is the main user of the system.

Admin can:

Create events

Manage staff/force

Add venues

Assign staff

Create schedules

Update event status

View reports

Event Manager

The Event Manager is responsible for managing the operational activities of an event.

They can:

View assigned events

Check staff assignments

Monitor schedules

Update event progress

Manage event-related activities

5. System Requirements

5.1 Hardware Requirements

Computer/Laptop

Minimum 4 GB RAM

Minimum 20 GB free storage

Keyboard and Mouse

Internet connection

5.2 Software Requirements

Operating System: Windows/Linux

Programming Language: Java

Database: MySQL

Frontend: HTML, CSS, JavaScript

IDE: Eclipse / VS Code

Browser: Google Chrome or any modern browser

===== EVENT DETAILS =====

Event ID: 101

Event Name: College Cultural Event

Event Date: 10-10-2026

Venue: College Auditorium

Assigned Force: Security Team

===== EVENT FORCE MANAGEMENT SYSTEM =====

1. Add Event
2. View Events
3. Exit

Enter your choice: 3

Thank you for using Event Force Management System!

6. Functional Requirements

Functional requirements describe what the system should do.

6.1 User Login

The system provides secure login for Users.

6.2 Event Management

Admin can:

- Add new events

- View events

- Edit event details

- Delete events

- Update event status

7. Non-Functional Requirements

Performance

The system should respond quickly to user requests.

Security

Only users should access administrative functions.

Reliability

The system should store information accurately and consistently.

Process of the System

The overall process is:

Step 1: Admin logs into the system.

Step 2: Admin creates an event.

Step 3: Admin selects a venue.

Step 4: Available force/staff members are identified.

Step 5: Staff members are assigned to the event.

Step 6: Event date and duty schedule are created.

Step 7: Staff members perform their assigned duties.

Step 8: Event status is updated.

Step 9: After completion, the event is marked as completed.

Step 10: Admin generates the required report.

Conclusion

The **Event Force Management System (EFMS)** serves as the operational backbone for modern event planning and execution. By centralizing workforce registration, role allocation, scheduling, real-time tracking, and performance reporting into a unified platform, it solves the core challenges of manual coordination and communication delays.

Key Takeaways

- **Operational Efficiency:** Replaces error-prone manual spreadsheets with automated shift scheduling, task assignments, and real-time status updates.
- **Accountability & Control:** Ensures personnel presence and task compliance using digital verification methods such as geo-fencing and QR code check-ins.
- **Rapid Incident Response:** Enables immediate communication and real-time task reallocation during ground-level emergencies or unexpected crowd surges.
- **Scalability & Data-Driven Insights:** Provides post-event analytics on attendance, hours logged, and volunteer efficiency to streamline future event planning.
